

LOCKDOWN EXPRESS No 6

Not quite but we are on target.....

More photos of completed projects are required. Please send these soon! Thanks. Clive

So a decision has been made we are moving to **Level 3** at **11.59 pm** on **Monday 27th April**.

For some of us this move might mean being able to do additional things during the two week period scheduled for Level 3. If in doubt what these extras might be..... CHECK before you act

For several club members it will mean much of the same we have had in Level 4.

MOVING TO LEVEL 3 DOES NOT ALLOW THE RE-OPENING OF THE CLUB WORKSHOP. That happy event will not happen any time soon.

Patience and adherence to the restrictions will be a continuing test but **WE CAN DO IT!**

Not having a lathe in his workshop hasn't stopped our **ALEX** from tinkering with wood. Our talented member still managed to complete his Lazy Susan from a slab of beautifully grained rimu wood.

Well done **ALEX NELSON**.

I hope a high quality lathe very soon finds its way into your workshop.

Natural Edge CHERRY wood bowl

JOHN BAKER's first shot at turning a natural edge bowl. This project was self-taught through a confident approach, enthusiasm and willingness to 'give it a go'.

Methinks John's potential is somewhere between high and the sky.

whoever lost a bundle of 100\$ bills tied up in a rubber band... I found the rubber band

Let's get rid of this evil devil!

COLIN MCKENZIE has taken his spinning top skills and varieties to another level. If you would like to have a shot at making one of these special spinners then check out the next two pages of instructions.

Terry Scott is putting up a prize for the spinning top box, which impresses the judge the most.

Picture above:
The completed box

Picture below:
The lid is a spinning top and spins on a specially made dip in the bottom of the box. Inside the box is another spinning top. This one turns over and spins on its shaft.

Instructions: You can obtain these from:
www.sawg.org.nz

Go to projects : (S to Z)
